

MMP100 | WEB DESIGN PROJECT STATEMENT

YOUR_NAME: Maria Goetz

Title: web project

Semester/Year: spring 2026

GitHub Repository: <https://github.com/fiumu/portfolio.webbbb.git>

GitHub Pages URL: I couldn't get the URL, I tried to get it but it didn't work,

Project Description

This website is my portfolio for the MMP100 class. Every project on this website is based on my personal life. An audio project based on my weekend mornings, and an animation that is based on my personal experience with anxiety. My 3d project is based on an original character who has had the same experiences as me. The image project shows my life in my happy place, where I have room to grow in skill. These projects are surrounding my personal experiences in life.

Who is your intended audience for this site (potential employers, transfer admissions officers, classmates, family/friends, or another audience)?

My audience is people who would like to view my art. Family, friends, I made this website really simple, anybody can understand it. My father does not understand the internet, so I aimed to make it accessible for him.

- How does your site's design—layout, colors, typography, and imagery—support your goals for that audience?

The style is really simple and it reminds people of the old websites that started on the internet. I felt this was necessary for my audience, they have near no experience with modern technology.

- What CSS selectors, layout techniques, and properties did you use to style your site?

I did attempt to use layout techniques, but it did not seem to work with my site's design.

- What was the most challenging technical part of creating the website (HTML structure, CSS layout, media integration, publishing, etc.) and **how** did you solve it? Include specific steps you took.

The most challenging part was getting the files I needed sourced correctly. Everytime I would source my file, nothing would show up. I had to reach out to people who know about phoenix code, and they really did help. I got started on Github, and the website stopped working for me. I was able to get my URL, but Github was not showing me my website. I was only being shown the README. I have continued to reach out to people, and still have had no luck fixing it.

Credits

Give yourself credit for the audio, image and video files you used in your site.

If you also used other people's assets outside of the projects (like for icons) then include credits for those too.
